

Dispatch Incident Report — Order OMR-AF/26-27/2330

Outlet: Nutriobox (Sector 63 Noida) · Date: 21 Sep 2026 · Prepared for the dispatch team. What happened, why, what we fixed, and what is still open.

1. Summary (in one line)

Order 2330 posted as **six separate vouchers instead of one**, and **Sweet Corn was dispatched 30 against an order of 1**. The voucher duplication is now **fixed on the server**; two follow-up actions remain (flash the Sector 63 gun, and correct Sweet Corn in PACT).

2. What the team saw

- The order created **multiple voucher numbers** (AF/26-27/2846, 2847, 2849, 2850, 2852 ...), not one.
- The Pending Outlet Requisition report kept **changing between reads** — the same items showed delivered in one refresh and pending in the next.
- Sweet Corn (1 Kg)** showed **30 delivered against 1 ordered** (–12 ... –29 pending, i.e. a big over-dispatch).

3. Why it happened (root cause)

Cause A — PACT report lag → duplicate vouchers

The auto-post runs on a short timer. Each cycle it asks PACT's pending report "what have we already delivered?" so it only posts the rest. But PACT's report takes a few minutes to catch up after a voucher is posted. So each cycle saw "nothing delivered yet," and re-posted the same items as a **brand-new voucher**. Repeated every few minutes, that produced six vouchers for one order. (PACT's per-line cap kept most lines from double-delivering, which is why the totals were close but the report looked chaotic.)

Cause B — Sweet Corn over-scan

The Sector 63 gun is still on an **older build that does not have the over-scan cap**. It let 30 units of Sweet Corn be scanned against an order of 1, and PACT accepted the 30. On a gun with the new build, the scan would have been refused at 1.

4. What we fixed (already live on the server)

Report-lag bridge: the worker now remembers exactly what it has already posted in this session and will NOT re-send those packs while PACT's report catches up. Each voucher now contains only genuinely-new items — no more duplicate vouchers of the same items.

This is deployed and running now. It does not need the gun to be re-flashed — it protects every order from tonight onward.

5. Two actions still needed

ACTION 1 — Flash the new gun build (v3.9.69-test) onto the Sector 63 handheld. That gun is on an old build; the over-scan cap that stops things like the 30× Sweet Corn is only in the new build.

ACTION 2 — Correct Sweet Corn in PACT for order 2330: it shows 30 delivered vs 1 ordered. This is an inventory correction the team must make in PACT (reduce that line to 1). It cannot be auto-corrected safely from the app.

6. Current state of order 2330

Item	Status
28 of 30 lines	Delivered correctly.
Chocolate Peanut Butter (1), Spinach Corn Kebab (4), Whole Wheat Panini Bread (1)	Still pending — scan + submit to dispatch; they will post cleanly now (no re-posting of the rest).
Sweet Corn (1 Kg)	Over-dispatched 30 vs 1 — correct in PACT (Action 2).

7. For the floor going forward

- This will not repeat on other orders — the server fix is live for all outlets.

- Once the Sector 63 gun is flashed, over-scans (like 30 vs 1) are blocked at the point of scanning.
- Note: with auto-post, an order can still create more than one voucher (one per posting cycle for the newly-scanned items) — that is normal and each is correct. Moving to the 15-minute production timing will keep the number of vouchers small.

Incident: OMR-AF/26-27/2330, Nutriobox (Sector 63 Noida), 21 Sep 2026. Server fix live; gun flash + PACT Sweet Corn correction pending. — NutrioBox / Sukhna Foods dispatch.
